

Population Health Management with Ad Hoc Clinical Analytics

Better Tools. Better Results. Best Practices.

Clinical quality and patient outcomes are now actively tied to financial success in healthcare. Better performing practices need actionable population health and clinical analytic tools to help improve chronic care management, eliminate gaps in care and maximize participation results for P4P initiatives such as MIPS, ACO, PCMH, UDS and many others.

Gathering and managing unique care plan populations, clinical quality measures and manually identifying gaps in care is time consuming, tedious and error prone.

Our newly released Population Health Management module delivers advanced clinical analytic capabilities including interactive daily CQM monitoring dashboards with drill through analysis and clinical population ad hoc reporting. Practices can now easily define, monitor and manage care plans for unique patient panels using a myriad of clinical criteria and visit patterns.

- **Maximize CQM's for MIPS, ACO, PCMH, UDS and other P4P Initiatives**
- **Expand Chronic Care Management**
- **Monitor and eliminate gaps in care**
- **Define your own Clinical Quality Measures**

Knowledge is power.

- Easily identify and effectively manage unique patient populations to avoid gaps in care.
- Report on practice and provider performance for any clinical quality measures including custom measures.
- Proactively manage PQRS quality measures to maximize your filings toward MIPS and Value Based Modifier adjustments.
- Turnkey Clinical Quality Measures for MU, PQRS, PCMH, ACO, UDS and other P4P initiatives.
- Combine data from multiple sites and EHR systems.

Expand Chronic Care Management

Easily identify and track the patients that are eligible for CCM. Effectively manage unique patient populations that require more complex care plans.

Monitor and eliminate gaps in care

Identify patients that are not meeting the clinical quality criteria to eliminate gaps in care and maximize the performance results of your clinical quality measures.

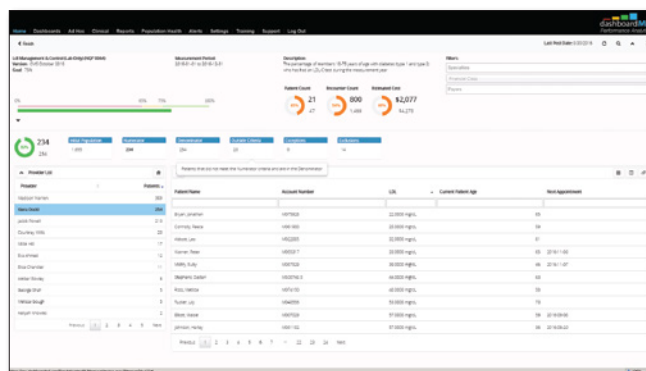

Define your own Clinical Quality Measures

We deliver turnkey quality measures for MU, PQRS, PCMH, ACO, UDS and other P4P initiatives with the ability to be personalized for each practice or specialty. These customized measures provide more targeted insight into the performance of the entire practice and individual providers.

Empower your team.

Our industry leading clinical ad hoc capabilities and customizable CQM's, produce an extraordinary population health management and clinical quality reporting environment. Daily monitoring of unique patient populations, gaps in care, and clinical quality measures with our interactive dashboards empowers your entire team.

Maximize CQM's for MIPS which combines PQRS, VM and MU

Make sure to put your best measures forward. We can track any number of PQRS measures and compare them to a baseline. This allows you to choose the best measures that will give you the best advantage when submitting to the Value Based Modifier program.

Turnkey Clinical Quality Measures for MU, PQRS, PCMH, ACO, UDS and other P4P initiatives

Our turnkey CQM's are loaded automatically by extracting data directly from your EHR. Displayed on interactive dashboards, your office will effectively track process improvement initiatives and report the required quality metrics to comply with any P4P reporting requirements.

Enterprise Data Warehousing

Combine data from multiple sites and/or multiple EHR systems to produce a single source reporting environment.
